CODE REVIEW

NOTES

SHARE YOUR ACCOMPLISHMENT!  

Meets Specifications

Overall great job!

Visualization is Explanatory

The visualization centers on a specific, clear finding in the data.

Great job with your analysis, very thorough.

The selected finding is clearly communicated. Design choices foster communication between the reader and the visualization.

Excellent design choices and your story was very easy to understand. Good job!

Design

A reader's summary of the graphic would closely match the written summary in the writeup, or a reader would identify at least one main point or relationship that the graphic attempts to convey.

Great write-up

The visualization includes interaction or animation. The interaction or animation may be simple, such as a hover, tooltip, or transition. Interaction or animation enhances understanding of the data.

Excellent use of interactive tools/annotations

Initial design decisions such as chart type, visual encodings, layout, legends, or hierarchy are included at the beginning of the Design section in the writeup.

Feedback

Feedback has been collected from at least one person throughout the process of creating the data visualization. The feedback is documented in the Feedback section of the writeup.

The project includes evidence that the visualization has been improved since the first sketch or the first coded version of the visualization. All of the feedback is listed in the Feedback section of the writeup. Most design choices and changes are accounted for in the Design section of the writeup. If no changes were made to the visualization after gathering feedback, this decision is explained.

Thanks for including older versions. To be honest, it would have been much easier to review if you had public links to this as well. Not every reviewer has a paid version of tableau - luckily I do though!
